

Your
Cloud Journey
Begins With
OCI CAF

Introduction

Building a future on the cloud is promising.
And, this is how it looks like

2020 _____

17% rise in cloud adoption revenue,
clocking USD 266.4 billion

2021 _____

75% of the midsize and large
organizations will adopt cloud

2022 _____

60% of organizations will use
services from third-party MSPs

Source: Gartner.com

The numbers are adding up. The path is clearly visible. The question is, how do you embark on the journey to cloud? You need a clear roadmap, well defined milestones and the right partner who can guide you at every step.

Cloud4C is your trusted partner in this journey, and **OCI** is the platform best suited for your digital transformation.

However, before you begin, you must assess cloud readiness, build a blueprint, create a strong foundation and then migrate and manage workload on cloud.

Oracle Cloud Adoption Framework (CAF) is a four-step process to modernize your legacy systems. Gain the advantage of business transformation with multi service capabilities spanning IaaS, PaaS and SaaS.

Assess your cloud readiness and move ahead with confidence as our experts guide you through the exclusively designed **OCI CAF** workshop.

Cloud Adoption Framework on Oracle Cloud Infrastructure

40,000+

Instances Migrated

8,000+

Database Migrated

Enterprises have the opportunity to build a robust Cloud Adoption Framework that guides them to choose the right set of applications, databases and systems for cloud migration, with a proven four-step process:

1 Application
and workload
assessment

2 Migration
blueprint

3 Landing zone
creation

4 Workload
migration

Cloud4C OCI expertise equips you with TCO analysis, DC Modernisation, 100% compliant infrastructure and enhanced security with best of breed solutions such as SOC, SIEM and SOAR. AIOps and DevOps powered automation apprehend and mitigate risks, safeguarding your IT environment from any malicious intent.

Scenarios We Support

- **Datacenter Transformation**
- **Workload Modernization**
- **Well defined framework to Transform, Govern and Innovate**

OCI CAF is Best Delivered with Cloud4C Expertise

At Cloud4C, IT modernization efforts are supported with unmatched security, DR and compliance for boosting the overall performance. Our experts guide you in accelerating DC modernization with a comprehensive mitigation strategy, relevant security tools configuration, and business-aligned compliance controls.

Guide to OCI CAF

Assess thoroughly - What you should do?

Evaluate the cloud readiness of your IT environment including network, security, applications, OS and databases to gain a clear line of vision for migration. Cloud4C experts examine your applications based on specific CAF parameters, identifying workloads for migration based on complexity, business needs and impact on performance.

Define milestones - How you should do it?

Blueprint is the roadmap that guides you in building your cloud migration plan. It orchestrates the entire journey in a structured manner, keeping in mind the business vision and strategy. Blueprint also informs the choice of tools, technologies and processes to make the most of your cloud strategy.

Design the landing zone - Where should you deploy workloads?

The most crucial step in building a cloud presence is to design the landing zone that supports the overall migration plan. It must have the capabilities to evolve and scale as businesses grow. A reliable landing zone built on OCI takes several key elements into consideration, including network, compute capacity, storage, security as well as compliance controls, performance, cloud management and governance policies.

Plan the migration - The answer to your IT modernization needs.

A well executed CAF, guided by the experience of certified experts, supported by advanced tools leads to frictionless migration. This is not a one-time process. Your migrated workload needs constant monitoring for business continuity, cost optimization, scalability and enhanced performance. With Cloud4C as your partner, you are assured of not just CAF advantage but also a cloud environment performing at peak with our award winning managed services.

Why Cloud4C?

Cloud4C brings together AIOps, DevOps and DevSecOps practise as well as IaC experience to design and execute the Cloud Adoption Framework. Cloud4C customers gain the most of OCI with a strategic approach in solution delivery.

What do you gain?

- Cloud migration advisory for strategic framework
- Complete security for IT environment with Oracle certified experts
- Benefits of Oracle tools and solutions including OCI, DB services, migration factory, Oracle SPARC super clusters and application support
- 7+ Reg-tech frameworks, 40+ Control Objectives and 26 security tools for security
- Experience of managing 800000 Events Per Second (EPS) and 13000 HBSS instances
- Expertise of delivering 3200 UTMs
- 24*7 System Monitoring & Management from Central/Local NOC/SOC

Our Multi-Cloud Capabilities

- 23 CoE and over 2000 cloud experts with 12+ years of rich experience
- Proven expertise of migrating 40000+ Instances and 8000+ Databases
- Certified resources for public cloud implementation, CloudOps, DevOps, Transformation and Migration
- Pre-designed and Industry/country specific compliance mapping
- AIOps powered managed services with end to end ownership
- Intuitive DR solutions with stringent SLA for RPO/RTO
