Microsoft Azure Virtual Desktop (Azure)

Threat Protection (Security)

Al Platform on Microsoft Azure

Build Al Apps on Microsoft Azure

Advanced Specializations Future roadmap - 2025

- Hybrid Cloud Infrastructure with Microsoft Azure Stack HCI
- Data Warehouse Migration to Microsoft Azure

Solution Partner

- Solutions Partner for Infrastructure (Azure)
- Solutions Partner for Data & Al (Azure
- Solutions Partner for Modern Work
- Solutions Partner for Digital & App Innovation
- Solutions Partner for Security

Partner of the Year, UAE 2022. Qatar 2020

Rising Star of the Year, **APAC 2021**

Security Partner of the Year (Malaysia 2023)

Finalist - Endpoint Management Trailblazer (MISA 2025)

Cloud4C Microsoft 365 Defender Enterprise Deployment Offering

Unified XDR & Sentinel Correlation

Automation, SOAR & Playbook Orchestration

Identity-First Protection & Conditional Access

Compliance, Data Protection & DLP Integration

Rapid Enterprise Adoption & Continuous Optimization

Advanced Threat Detection & Hunting

SOC Modernization & Managed Detection

Proven Business Outcomes with Cloud4C

- Deployment completed within 4–6 weeks for enterprise Microsoft 365 environments
- 60% reduction in phishing-driven incidents through tailored protection and automated playbooks
- Faster time-to-value with unified suite coverage and actionable use cases delivered on rollout
- 100% compliance mapping to ISO 27001, HIPAA, PCI-DSS and GDPR with built-in reporting
- Improved SOC efficiency and faster incident triage with automated playbooks and Copilot guidance
- Enterprise-proven delivery across BFSI, healthcare, manufacturing, government, telecom and retail

Cloud4C Microsoft 365 Defender Enterprise Deployment Methodology

- Inventory Microsoft 365 estate (identities, mail, Teams, endpoints, apps) and map telemetry sources
- Compliance & policy baseline mapping (ISO 27001, HIPAA, PCI, GDPR) and regulatory gap analysis
- Prioritise high-value assets and attack paths to define initial use cases

Assessment & Risk Baseline

Phased Enterprise Rollout

- Phased, low-impact onboarding of Defender components (Endpoint, Office 365, Identity, Cloud Apps) and core connectors
- Deploy foundational controls first (conditional access, anti-phish, EDR) then enable advanced detections and response playbooks
- Early activation of priority use cases to deliver rapid visibility and protection

- Tailor correlation rules, automated playbooks, alert flows and incident runbooks across Defender components
- Rigorous validation: simulation testing, false-positive tuning and end-to-end containment exercises
- SOC enablement via analyst workshops, runbooks and Copilotfor-Security readiness

Configuration, Validation & SOC Enablement

Continuous Optimization & Governance Partnership

- Post-deployment tuning: refine detections, thresholds, automations and response playbooks
- Ongoing advisory: roadmap alignment to Microsoft updates, threat intel enrichment and policy lifecycle management
- Quarterly health reviews, threathunting cadence and compliance reporting for sustained operations

Why Cloud4C for Microsoft 365 Defender Enterprise Deployment?

Proven M365 Defender Enterprise Rollouts

Repeatable, low-disruption deployments of the full Microsoft 365 Defender suite for large, regulated enterprises

Defender Use-Case Accelerators

Prebuilt correlation rules, workbooks, playbooks and dashboards tuned for Office365, Endpoint, Identity and Cloud Apps.

Identity-First Protection & Entra Integration

End-to-end identity risk detection, conditional access hardening and entitlement governance across Defender telemetry.

Precision Alerting & Automated Containment

KQL-driven detection, correlation tuning and automated playbooks to reduce noise and accelerate response

SOC Enablement & Copilot Readiness

Hands-on analyst workshops, runbooks and Copilot-for-Security playbooks to operationalize Sentinel fast

Sovereign & Compliance-Aligned Deployments

Deployments configured for in-country data residency with built-in ISO/GDPR/HIPAA/PCI compliance mappings.
