

# Managed Oracle Databases on OCI: Smart Modernization for Mission-Critical Systems

Optimize your Oracle-to-OCI journey with proven automation-first methodologies while maintaining business continuity.

## Run Oracle Databases with Confidence on OCI.

Modern enterprises need faster, smarter, cloud-ready environments for their mission-critical Oracle assets. Oracle Cloud Infrastructure helps organizations run Oracle database workloads on Oracle's native cloud platform, enabling high-performance database services, integrated security, automation, observability, and cloud-scale operations.

Cloud4C, part of Capgemini, helps enterprises migrate, modernize, secure, and manage Oracle database environments on OCI with minimal disruption. As a trusted Oracle managed services partner, Cloud4C adds value through migration planning, automation, observability, security, compliance support, and 24x7 managed operations.

## The Case for Change — Now. Not Later.

Escalating infrastructure and maintenance costs

Legacy HA/DR architectures unable to support 24x7 availability

Performance bottlenecks in scaling workloads

Security and compliance risks due to outdated systems

Operational inflexibility and long provisioning cycles

Growing need for AI-ready, cloud-native database modernization

## The Operational Advantages of Oracle Database on OCI

### » Native Oracle + OCI Integration

Run Oracle database services on Oracle's native cloud platform for simplified operations, integrated security, and cloud-ready performance.

### » Built-in HA & DR Readiness

Leverage Oracle's enterprise-grade availability architecture, backup capabilities, and disaster recovery design patterns to support business-critical continuity.

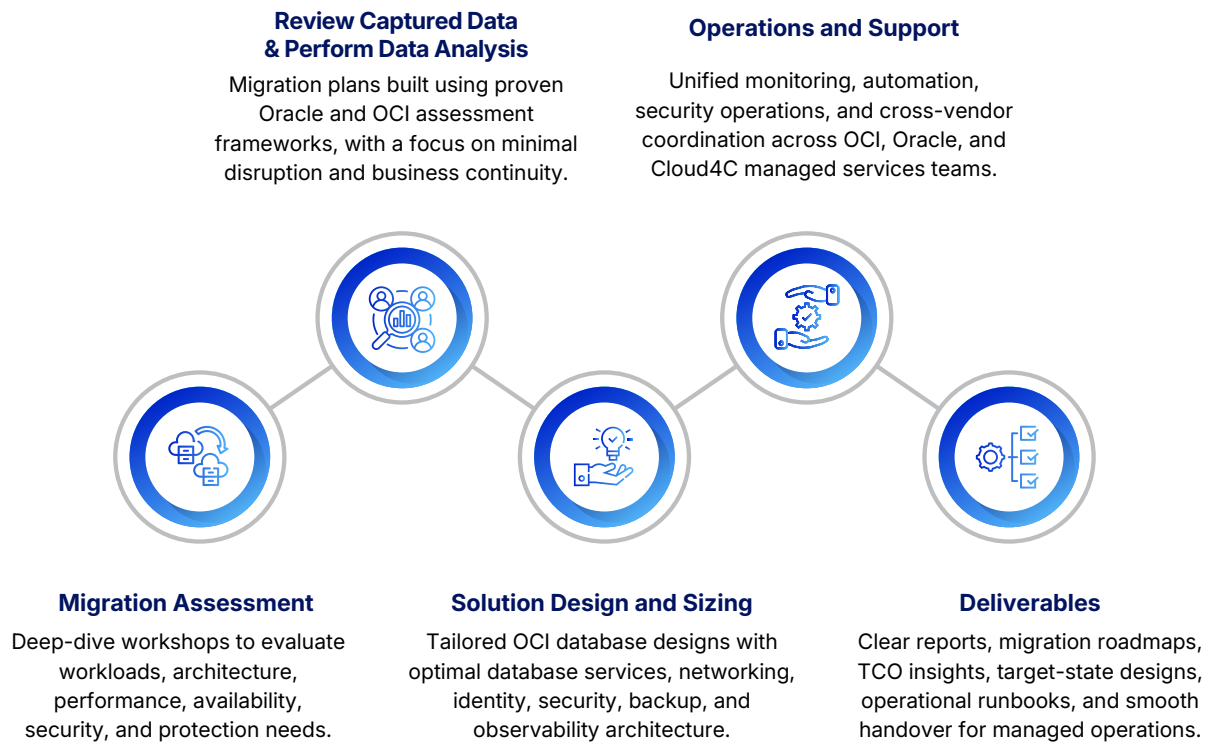

### » High Performance & Elastic Scale

Access Oracle Exadata Database Service, Oracle Autonomous AI Database, and Oracle Base Database Service capabilities for mission-critical workloads requiring performance, resilience, and scalability.

### » Modernization-Ready Architecture

Connect Oracle data with OCI AI, analytics, security, integration, and cloud-native services to accelerate modernization across applications and data platforms.

## Our Approach - Built on Best Practices. Tuned for Your Workloads.

## Core Solutions: Oracle Databases on OCI and Oracle Cloud Infrastructure Synergy

### Native Oracle Infrastructure on OCI

Oracle Cloud Infrastructure delivers native Oracle database services on Oracle's cloud platform, enabling enterprises to modernize mission-critical Oracle workloads with integrated cloud operations.

### High-Performance Oracle Database Services

Access Oracle Exadata Database Service, Oracle Autonomous AI Database, and Oracle Base Database Service capabilities for workloads requiring enterprise-grade performance, resilience, and scalability.

### Low-Latency OCI Integration

OCI-native integration supports secure connectivity between Oracle databases, OCI applications, data platforms, integration services, and enterprise workloads.

### Unified Managed Operations & Observability

Monitor and operate environments using OCI-native tools such as OCI Monitoring, Logging, Database Management, Operations Insights, and Oracle Data Safe, along with Oracle-native observability and management capabilities for database, infrastructure, and security visibility.

## Where Cloud4C Adds Value

### Accelerated Migration & Modernization

- Lift-and-shift and re-platforming expertise for Oracle workloads
- Proven cutover methodologies to minimize downtime and disruption

### Managed Services Excellence

- 24x7 monitoring, patching, and performance tuning
- Unified support across OCI and Oracle database environments

### Automation & DevOps

- CI/CD pipelines for database deployments
- Automated provisioning, scaling, and backup strategies

### Security & Compliance Advisory

- Guidance for GDPR, HIPAA, ISO, and industry-aligned compliance
- OCI IAM, MFA, Oracle Data Safe, SIEM integration, and end-to-end security controls

### Cost Optimization

- BYOL and subscription licensing advisory
- OCI consumption and Oracle licensing optimization

### Innovation Enablement

- Integration with OCI AI services, Oracle Analytics Cloud, GoldenGate, AI Vector Search, and cloud-native Oracle services
- Data modernization to unlock new business insights

### Training & Knowledge Transfer

- Hands-on enablement for customer IT teams
- Workshops, documentation, and operational runbooks

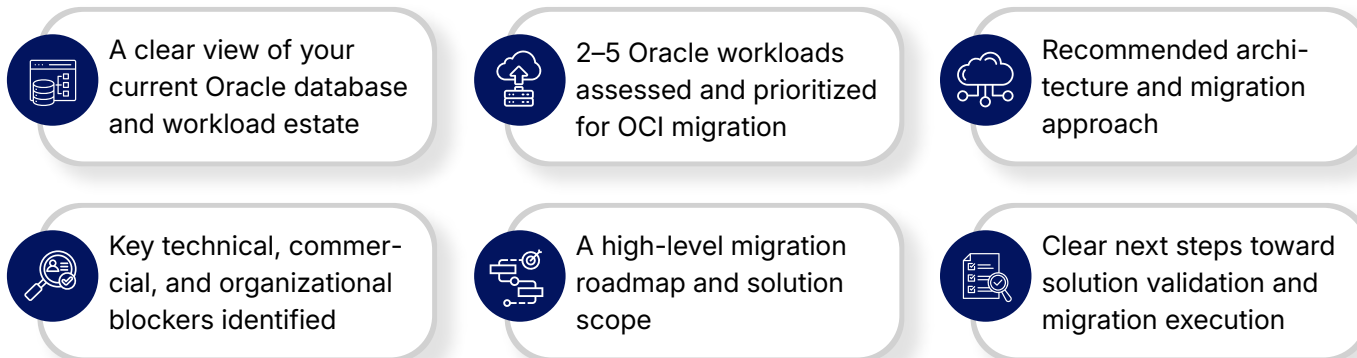

### Lifecycle Support

- Pre-migration assessment to post-go-live support
- Optional Annual Maintenance Services for long-term stability

## Start with a Fully Funded Oracle AI Database Migration Assessment Workshop

Not sure about the right approach for your database modernization efforts? Join Cloud4C for a focused, fully-funded 4–6-hour workshop, delivered in collaboration with Oracle, to assess your Oracle database estate, identify priority workloads, and evaluate why Oracle Databases on OCI is the right path for your database transformation journey.

### In one workshop, you will get:

### About Cloud4C: Why Choose Us?

#### Globally Trusted Multi-Cloud MSP with 2500+ Transformations in 25 Countries

Cloud4C, part of Capgemini, is a global leader in AI and Automation-Driven Managed Services and Managed Security Services, for mission-critical workloads, empowering global enterprises on Azure and Oracle. As an Oracle CSPE and Oracle Cloud Registered Partner with 4 Oracle Cloud specializations, we deliver secure, automated, high-availability operations that accelerate cloud modernizations with confidence.
