CLOUD4C
A CtrlS Company

Fortify Your Cyber Perimeters with a Zero Trust Approach

Go beyond just tools. Cloud4C helps enterprises unify Microsoft security capabilities, align with compliance, and build a Zero Trust, security-first culture.

Can your business withstand today's multi-vector cyber threats?

Cyber attacks are getting faster, more complicated, and more specific all the time. When businesses buy Microsoft security technologies, they generally run into one problem: converting what they learn into results.

Cloud4C covers this gap with their specialized Microsoft Security Advisory and Zero Trust consultancy. This helps businesses gain visibility, improve compliance, and make their defenses stronger against new threats in IT, IoT, and cloud environments.

Would your defenses hold up to a compliance audit today?

- ✅ Blind spots across IoT, OT, and hybrid assets

  Risks hidden in internet-facing systems and shadow IT

- ✅ Intelligence that doesn't reach SOC operations

- ✅ Audits treated as "tick-box" exercises, not continuous processes

- ✅ Security tools underutilized due to lack of skills or training

Translating Security Investments into Tangible Business Value: Why Expert-led Strategization Matters?

Full visibility and protection for IoT, OT, and external assets

Smarter SOCs powered by real-time threat intelligence

Compliance-first assessments with instant remediation

Zero Trust rolled out step by step, enterprise-wide

Security-aware workforce ready to counter insider and phishing risks

Measurable ROI on Microsoft security investments

Confidence to scale securely in highly regulated markets

Cloud4C's Microsoft Zero Trust Consulting and Security Advisory Services

IoT & OT Security Consulting
Defender deployment consultation for IoT with Cloud4C sensors, SOC playbooks, and incident response.

External Attack Surface Management
Microsoft EASM consultation for constant monitoring, takedowns, and patch SLAs.

Zero Trust Consulting
Advisory services on how to apply Microsoft's Zero Trust approach for apps, data, identity, and endpoints.

Threat Intelligence
MDTI is now part of SOC, which makes triage better and helps find threats before they happen.

Security Assessments
Secure Score, Sentinel, and Defender analyze your posture and map it to global standards.

Awareness and Training
Workshops and simulations to create a strong, security-first workforce.

Assess
Identify risks, compliance gaps, and security posture using Microsoft Secure Score, Sentinel, and Defender insights.

Advise
Define a Zero Trust roadmap, prioritize remediation, and map controls to global compliance standards (GDPR, HIPAA, RBI, ISO and more).

Implement
Deploy Microsoft security tools, integrate threat intelligence, and operationalize SOC playbooks.

Operate
Provide 24×7 monitoring, periodic reassessments, and continuous improvements to strengthen resilience.

About Cloud4C:
Global Leader in Secure by Design Enterprise Transformations

Cloud4C is a global leader in AI-powered, automation-driven, application-centric managed services and cloud infrastructure, delivering secure by design transformations solutions across 29 countries (Own in-country PODs in 25 nations). Headquartered in Singapore, it serves 2500+ enterprises—including 50 Global Fortune 1000 firms—with end-to-end transformation under a Single SLA covering cloud (hyperscale public/private/hybrid/multi-cloud), cybersecurity, FinOps, and AI. Cloud4C is an Azure Expert MSP with 14 Advanced Specializations and is a member of the Microsoft Intelligent Security Association (MISA).
